**Subject:** City of Antioch Comments on the Third Draft (redline version) Interim Delta Plan  
**Importance:** High

To the Delta Stewardship Council  
Attn: Gwen Bucholz  
Attn: Keith Coolidge

Gwen,  
Keith,

The redline Interim Plan included more robust discussion of the Western Delta economy, water quality and municipal use - thank you!

However, we asked our Flow Science consultant to review Western Delta hydrology, salinity and other technical issues. We found a few that need attention. Please see these comments below.

We request that these comments are considered and addressed.

Please confirm that these will go into the record for consideration for the final draft, for review at the 8/26-27 meetings:

- Antioch is still not on the **map of diversions** (Figure 5-1, pg. 42)
- “Water quality has been a concern in the Delta since the late 1880s...into the Central Delta near Antioch...” (Section 1, pg. 3, line 34-35) –should be **Western** instead of Central Delta
- Section 1, pg. 7, line 20-21: “Development of water storage and conveyance facilities modified the flow patterns by shifting peak river flows from fall through spring months to summer months” – **not accurate! Peak flows were not only shifted by water exports but also reduced (both on a seasonal and annual basis).**

Thanks for your consideration.

Sincerely,  
Ann B. Spaulding, Consultant  
City of Antioch
